

## FAQS

Who is a good candidate for Hair Restoration?

Men and women with most pattern baldnesses and an adequate amount of donor hair on the back and sides of the scalp to transplant into the areas of thinning and balding.

Is the procedure permanent?

Yes! The donor hair that is sourced to transplant is genetically different than the native hair in the areas to where it is transplanted, so once it grows in it is permanent and unaffected by the hormones that killed the native hair.

What will my downtime look like?

Resting for 3 days, no heavy weightlifting or sweating for 10 days, but the procedure is minimally invasive, but most patients go back to work in 2 days, especially if working remote.

What are the overall benefits?

A younger more youthful appearance, improved confidence, and a permanent investment in yourself!

# HAIR RESTORATION

NeoGraft® ARTAS

*Complete hair transformation.*

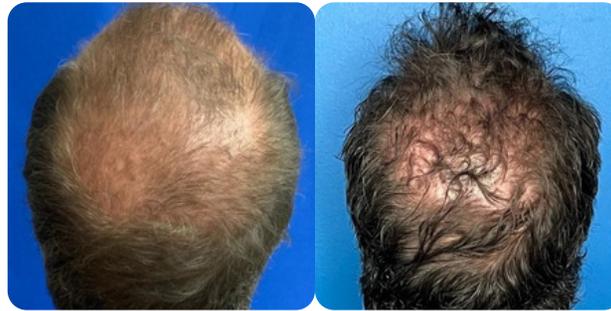

# Hair Restoration at Carolina Age Management Institute

We offer a variety of surgical and nonsurgical options for patients suffering from pattern hair loss. For surgical options, we perform Both ARTAS and Neograft minimally invasive FUE hair transplant procedures. Healthy and genetically permanent hair follicles are extracted one by one with one of these tools and relocated to areas of thinning or balding to restore youth and confidence. Which procedure is best for your pattern of loss can be discussed with one of our specialists!

## Neograft vs. Artas

Both Neograft and ARTAS are minimally invasive FUE extraction tools- The ARTAS robot utilizes artificial intelligence to extract donor hair for patients with virgin scalps and dark, straight hair. The Neograft machine is a state of the art manual FUE machine that allows for more flexibility with patients with variable hair types and those who have had prior procedures performed in the past. Contact one of our specialists to discuss which you are best suited for!
